

Auto Paint & Scratch Removal

There's More To Paint Than Meets The Eye.

Achieving a perfect color match commonly requires 2-3 coats of pigment. Damage that penetrates to the bare metal requires extensive preparation prior to painting. Clear coats must be meticulously polished to appear clean and smooth from all angles, especially outdoors.

Full Tilt uses state-of-the-art technology to analyse all vehicle makes and models and restore them to exact factory color specifications. The durability of our paint will meet or exceed OEM standards, withstand any weather conditions and is warranted for as long as you own your vehicle.

Our Painting Process:

1. Paint analysis conducted with 5-way color eye camera
2. Sample paint swatch prepared to perform visual color match
3. Vehicle detrimmed and prepped for paint booth
4. Vehicle painted with best practices as dictated by OEM paint supplier
5. Low-VOC clear coat is applied over pigment layers
6. Vehicle baked at 140° F for 15-30 mins to cure finish
7. Vehicle is demasked and sent to reassembly for completion
